Title: picture/poster pals

SPECIFICATION

Picture/poster pal is a means by which to temporarily display 2 dimensional presentations of varied sizes through a process as simple as measuring the presentation piece and then slitting the decorated adhesive backed vinyl mitered molding strips in the middle to the needed size. Then place the four visibly complimentary varied shaped components over the unsightly slits to provide a finished look to the frame.

TITLE OF INVENTION

Picture/poster pals

CROSS-REFERENCE TO RELATED APPLICATIONS

Not applicable

BACKGROUND OF THE INVENTION

This device is a solution to display and preserve various 2 dimensional pieces in a simple yet attractive manner. Since the mitered ends of the molding are pre-cut the consumer does not have to fight with measuring the mitered edges. The measuring task is reduced to measuring the presentation piece, subtracting 1" and cutting that measurement from the inside middle area of the self-adhesive vinyl molding strips. The four design complimenting component shapes, at least the same thickness as the accompanying molding, are then placed over the cuts on all four sides in order to hide the cuts and further provide a finished frame look.

BRIEF SUMMARY OF THE INVENTION

An easy way to temporarily hang 2 dimensional pieces for display or protection.

Title: picture/poster pals

DETAILED DESCRIPTION OF THE INVENTION

The picture/poster pal set will provide four decorated die-cut molding strips. Each strip will be the same width. Two of the strips will be the same length and the other two strips will be shorter (varied according to the design size). All four molding strips made of any repositionable adhesive backed vinyl or pliable magnetic material will have a precision die-cut 45° miter at both ends of each molding strip. The set will also contain four additional pieces made in a design complimentary to the molding strips. Each of these four pieces will have a length at least the same as the width of the molding strips. The molding strips can be cut in the center to fit around the presentation piece. The cut places when covered by the smaller complimentary shapes will present a finished frame look.
